

**BIO 183
Spring 2023
Unit 1**

**Group Review Paper Project Proposal- Due Feb. 6-8, 2023 by the start of lab.
(20 pts possible)**

**Information on Writing a Review Paper – scroll down
<https://guides.lib.umich.edu/c.php?g=283300&p=2915110>**

Everyone must add their OWN name and written contribution to the group project Google doc. 1 Person should not be the writer for the group. Each person should work on this project within this Google doc or Google group folder throughout the semester. Work should be evenly divided among the group members and approved by the Lab TA/instructor.

1. Submit a written plan of the Review Paper. What Pathogen do you choose? Why? Provide 1 different reference* from each student in the group. (5 pts)
2. Each group member should provide a brief summary of the reference and state how it fits in and will be used in the project. (5 pts individually graded)
3. As a group decide upon a basic structure for the paper (refer back to the project description on the lab website) to get an idea of the scope of the project. (5 pts)
4. Though everyone will need to contribute to the body of the paper, designate who will work on which parts of the rest of the paper. More than 1 person may be assigned to each of the other sections, but overall work and effort should be similar. This can change as people find more background or get interested in different facets of the project. (5 pts)

Again, please do ALL work for the project in the Google folder where everyone in the group and the TA have access to your work. Please do not erase or delete work. This way we can monitor group progress and contributions by all group members. This can be helpful for the group in case of illness or a student drops the course later in the semester. Keep your Final Proposal document in the google folder, though you will also need to submit it to your TA via Moodle as a Word Doc for grading.

* Help for writing References for Citations can be found on the Lab Website Resources.
